

Constructor overloading

package constructor;

public class constructor {

 constructor ()

 {

 System.out.println ("Hello");

 }

 constructor (int a)

 {

 int temp = a;

 System.out.println ("value is: " + temp);

 }

 public static void main (String [] args) {

 constructor obj1 = new constructor();

 constructor obj2 = ~~new~~ new constructor(10);

 }

```
public class student
```

```
    int roll number;
```

```
    String name;
```

```
    void studentDetail ()
```

```
{
```

```
        System.out.println("roll number");
```

```
        System.out.println("name");
```

```
}
```

```
public static void main(String args)
```

```
{
```

```
    student stu = new student();
```

```
    stu.studentDetail();
```

```
}
```
